Токенсейл

We are collecting:	300 000 ETH
Token Price:	0.0005 ETH
Method of Payment:	ETH
Start Date:	18.12.2017
End Date:	01.02.2018
Total Tokens Issued:	1.000.000.000
Token:	UST

What is the idea of Uservice?

It is a decentralized online platform on the server of blockchain Ethereum, with the core of smart contract technology.

It allows registration of any transactions and operations in the ecosystem which occurs instantaneously, according to which, within 3 minutes you can choose, confirm and pay for the services of auto service centers (ASC) anywhere in the world. Operations inside the platform are fully transparent and secure. The accumulated data opens the possibilities for additional monetization channels.

Problem

In the auto industry you can find many online platforms. They are all unique in their own ways, some sell cars, others provide auto diagnostics, auto service centers and many more. Individually, each has its own benefit, however, they share a common problem – lack of united platform.

Solution

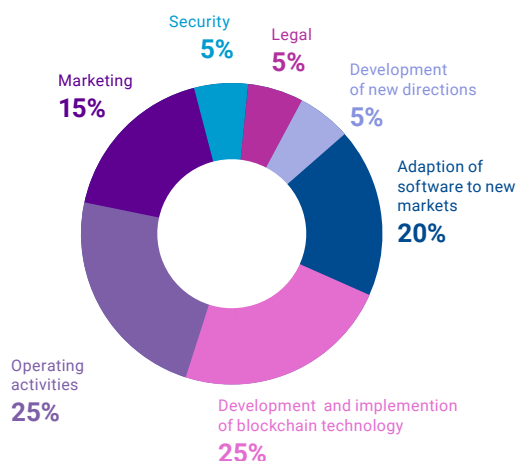

In the auto industry you can find many online platforms. They are all unique in their own ways, some sell cars, others provide auto diagnostics, auto service centers and many more. Individually, each has its own benefit, however, they share a common problem – lack of united platform.

UST Token

By introducing the internal token called UST in our ecosystem, we created a mechanism for interaction of participants of the ecosystem within a single platform.

We expect that the number of participants on our platform will increase, which means the cost of the UST token will grow (since UST token works on the deflationary model).

Use of proceeds

Token distribution
